

Kangaroo Mailer

Self-Expanding Foam Insulated Envelope

Fast and Easy to Use!

Our self-expanding Kangaroo Mailers provide highly efficient thermal and crush protection for temperature sensitive shipments. They directly replace bulky, breakable EPS foam cooler boxes without compromise. Simply load the mailer as you would an EPS cooler, seal shut with the attached adhesive strip, pierce to inflate, and ship! The compressed memory foam inflates to cocoon your items in a form-fitting cushion of protection. **No void fill, outer box, kitting, or taping!**

every shipment! Our mailer, packed with the exact same items, weighs 3lbs and has a dimensional weight of 3lbs! Regardless of your priority shipping contract, shipping a smaller package that weighs less will save you a remarkable amount of money. You no longer have to buy, erect and tape, or pay for the weight of cardboard boxes.

Takes Less Space

87% less space than EPS coolers!
A truckload of coolers is reduced to just 3 pallets!

The Kangaroo Mailer outperforms EPS coolers because of its intelligent design. As the foam inflates, air space is squeezed out, making standard ice packs more efficiently cool a smaller area, mitigating convection heat-loss and locking the gel pack exactly where you want it to be. Traditional box-shaped shipments allow the contents to bounce around, become marred, and lose desired orientation to the refrigerant, reducing duration and increasing the chance of freeze damage.

The greatest convenience afforded only by our mailers is the dramatic space savings. Heightened security limits storage space and complicates material handling. Our mailers offer an 8-to-1 storage density compared to the coolers they replace. This translates to faster packing and 87% reduction in storage space.

Cuts Shipping Costs in Half!

$$\text{Billed Weight} = \frac{[L] \times [W] \times [H]}{166} \text{ Actual Weight}$$

Avoid dimensional weight charges!
Ship a smaller, lighter parcel for huge cost savings

$$\text{Billed Weight} = \frac{[L] \times [W] \times [H]}{166} \text{ Actual Weight}$$

The biggest advantage of our mailers over coolers is the money you'll save on priority shipping. A standard 8x6x7" 1.5" EPS cooler usually weighs 3-4lbs when packed but has a dimensional weight of 7lbs, meaning you are paying for an extra 3-4lbs on each and

Nobody likes EPS coolers besides the companies that make them. They are difficult or impossible to recycle outside of ideal conditions, hard to open, take up too much space in the garbage bin, and are a fire hazard. Our mailers provide a greener alternative without compromising effectiveness. They reduce material usage, recycle into carpet pad, and simply take less space should they end up in the garbage.

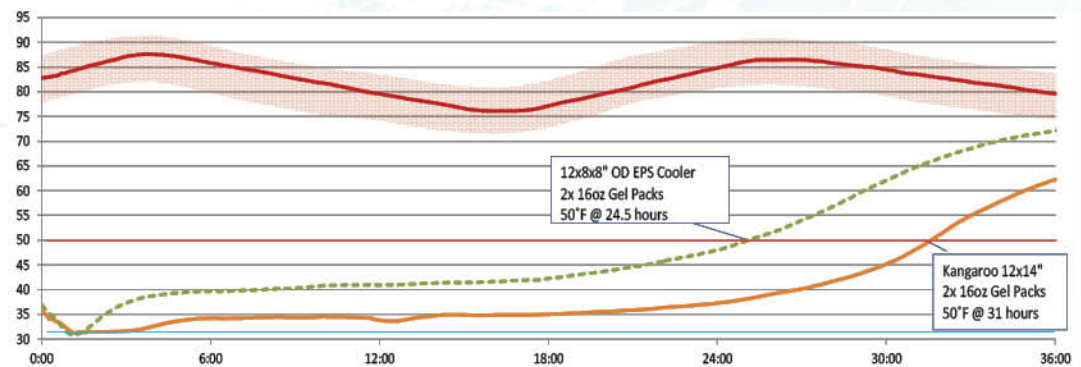

Simpler Shipping System

Approved by all Carriers!

- Compliant for UN3373 Shipments
- ISTA 3A 70kg Tested and Certified

Let us at Thermal Shipping Solutions compare your existing solution to our high-performance Kangaroo Mailer in our internal test lab.
